

RigMaster AI: Database Schema Documentation

Official Technical Reference - Interactive Edition

Collection: components

Description:

Stores the hardware catalog used for PC building. Includes CPUs, GPUs, Motherboards, etc. with technical specifications and pricing information in various currencies.

Schema / Key Fields:

- > `_id`: ObjectId (Internal)
- > `name`: String - Full display name
- > `category`: String - cpu, gpu, motherboard, etc.
- > `sub_category`: String - peripherals specifics
- > `price_usd`: Double - Base price in USD
- > `currency`: String - Local currency code
- > `specs`: Object - Categorized technical details
- > `brand`: String - e.g. NVIDIA, Intel, AMD

Developer Notes (Editable Field):

Collection: users

Description:

Manages user accounts, authentication, and personalized settings.

Schema / Key Fields:

- > `_id`: ObjectId (Internal)
- > `username`: String - Unique login identifier
- > `password`: String - Argon2/PBKDF2 Hashed password
- > `email`: String - User primary contact
- > `is_admin`: Boolean - Privilege elevation flag
- > `preferred_currency`: String - UI display preference

Developer Notes (Editable Field):

Collection: saved_builds

Description:

RigMaster AI: Database Schema Documentation

Official Technical Reference - Interactive Edition

Stores PC configurations saved by users, allowing them to revisit or share their builds.

Schema / Key Fields:

- > `_id`: ObjectId (Internal)
- > `user_id`: ObjectId - Link to users collection
- > `build_name`: String - User-defined name
- > `components`: List - Map of component IDs/Quantities
- > `total_price`: Double - Final build cost
- > `created_at`: DateTime - ISO timestamp

Developer Notes (Editable Field):

RigMaster AI: Database Schema Documentation

Official Technical Reference - Interactive Edition

Collection: ai_cache

Description:

Logs AI requests for analytics and caches responses to improve performance and reduce API costs.

Schema / Key Fields:

- > `_id`: ObjectId (Internal)
- > `cache_key`: String - Unique hash of prompt/config
- > `type`: String - assistant, recommend, analysis
- > `provider`: String - groq, gemini, etc.
- > `response`: String - The AI output text
- > `cached`: Boolean - Cache hit flag

Developer Notes (Editable Field):

Collection: shopping_cache

Description:

Temporary storage for external shopping results/prices to minimize external API rate limits.

Schema / Key Fields:

- > `query`: String - Search term used as unique key
- > `results`: Array - Extracted parts and links
- > `expires_at`: DateTime - MongoDB TTL expiration

Developer Notes (Editable Field):

Collection: settings

Description:

Global configuration for the entire application, manageable via Admin UI.

Schema / Key Fields:

- > `key`: String - Unique identifier (e.g. 'api_keys')
- > `value`: Mixed - Config data or nested objects
- > `description`: String - Purpose of this configuration
